## PROFESSIONAL SUMMARY

B.Tech Computer Science undergraduate (CGPA: 9.29/10, graduating May 2027) with internship experience shipping AI and cloud applications in Java, Python, and JavaScript. Skilled in REST API design, relational databases, CI/CD pipelines, and agile SDLC practices. Solved 300+ DSA problems on LeetCode and HackerRank.

## EDUCATION

**B.Tech — Computer Science Engineering** | *C.V. Raman Global University, Bhubaneswar* Aug 2023 – May 2027  
CGPA: **9.25 / 10.0** | No Active Backlogs | Coursework: DSA, OOP, OS, DBMS, Network Security, Software Engineering

## TECHNICAL SKILLS

**Languages:** Java, Python, C++, JavaScript, SQL

**Frontend & Backend:** React.js, HTML, CSS, Node.js, Django, REST APIs, React Hooks

**Cloud & DevOps:** AWS Lambda, IBM Cloud, Serverless Architecture, CI/CD Pipelines, Git, GitHub

**Data & Databases:** SQL, Relational Databases, DBMS, Kafka, Big Data Concepts

**Practices & Tools:** Agile/Scrum, SDLC, Secure Coding, Postman, VS Code

## INTERNSHIP EXPERIENCE

**AI Software Engineering Intern** | *Infosys Springboard — MediaMind AI Platform* Remote, 2026

- Built an AI content personalization platform in Python with 5 decoupled modules, increasing parallel feature delivery by 35% by enforcing separation-of-concerns across the codebase
- Automated input validation inside the CI/CD workflow, cutting unsafe content generation by 30% and removing 4+ hours of weekly manual QA effort from the release cycle
- Connected RESTful APIs to an AI inference layer handling 500+ concurrent requests; lowered average response latency by 20% through asynchronous processing and request batching

## PROJECTS

**AI Chatbot — Conversational Backend System** | *Python, LLMs, AWS Lambda, REST APIs, CI/CD* 2025

- Deployed a serverless chatbot backend on AWS Lambda that processed 5,000+ concurrent sessions using stateless design, achieving 40% infrastructure cost reduction compared to equivalent VM deployment
- Built a token-authenticated REST API layer with rate limiting and input sanitization, holding sub-200ms response times at peak load while following OWASP secure coding guidelines
- Set up CI/CD pipelines with unit tests, integration gates, and runtime validation, cutting build duration by 50% and raising deployment success rate from 72% to 97%

**Real-Time Weather Full-Stack Application** | *React.js, Node.js, REST API, SQL, JavaScript* 2025

- Developed a full-stack web application with a React.js frontend, Node.js middleware, and a SQL database back end, recording 99.5% uptime across 1,000+ live API requests in load testing
- Added a server-side caching layer that reduced third-party API calls by 60%, cutting page load time from 1.8s to 0.7s and raising the Lighthouse performance score from 64 to 91
- Secured 8 database endpoints with parameterized SQL queries and schema validation; applied React Hooks to trim unnecessary re-renders by 30%

## KEY ACHIEVEMENTS

- 9.29 / 10.0 CGPA** sustained across 4 semesters while completing 2 remote internships, 4 certifications, and 3 independent full-stack projects
- 300+ DSA Problems** solved on LeetCode and HackerRank covering arrays, strings, sorting, searching, recursion, and foundational trees and graphs — applied to achieve 20% algorithmic performance gains in production code
- 5 Industry Programs** completed at JP Morgan, Meta, Google, Palo Alto Networks, and PwC — covering software engineering, cloud architecture, and security domains

## CERTIFICATIONS

**JP Morgan SWE Job Simulation (Kafka, REST API, H2 DB, Project Setup)** — JPMorgan Chase & Co. Mar 2025

**Meta Full-Stack Developer Specialization (React, Django, APIs, Databases)** — Meta via Coursera Jun 2025

**Google Cybersecurity Professional Certificate (SOC, SIEM, Incident Response)** — Google 2025

**Palo Alto Networks Cybersecurity Certificate (Cloud & Network Security)** — Palo Alto Networks 2025
